

OUR SERVICES

Hepworth Acoustics is a specialist consultancy in acoustics, noise and vibration. Our aim is to deliver expert and cost effective advice in a straight forward personal style.

The company has assessed most of the noise problems and acoustic design issues arising within your industry and knows the most effective ways of dealing with them. Wherever possible, design solutions use standard construction materials to minimise cost and programme implications.

With offices across the UK from Newcastle to Bristol, Ashford to Warrington, we are able to offer the same high quality of service linked to speed of response from our local offices. We work in all of the main market sectors, and can handle all sizes of projects. Our scope of work covers conceptual

design through to commissioning tests, including planning applications and liaison with local authorities.

Hepworth Acoustics maintains awareness of all current and future legislation and design codes to ensure that clients are never caught out by changes in statutory requirements. The latest prediction methodologies are used to ensure that new designs comply with Building Regulations and other acoustic requirements, and we inspect works to ensure that they are correctly implemented.

The company was formed in 1990 and continues to enjoy collaborative working with design teams and clients to support every stage of development with a breadth of understanding, and the practical approach to realise the design aims for the development.
